

▶ Electronic Document Signing, Secure and Simple

Cryptoloc Secure 2 Client is designed for businesses that need an Electronic Document Signing Platform that offers both flexibility and security.

Cryptoloc Secure 2 Client (S2C) is a powerful Electronic Signature Platform designed for businesses that need documents to be signed electronically, without compromising security. It works by fully encrypting your document and sending a link to the recipient by email, asking them to sign it. Before they are allowed to open the document they must verify their identity using an SMS number, provided by you when sending the document. Only when the correct recipient has been identified using SMS, will S2C allow them to view and sign the document. The recipient will only be given a certain amount of time before access to the document is locked. To open the document and continue the signature process, they will need to re-verify their identity. Once finished you receive a legal certificate of signature which is admissible in most jurisdictions. S2C is available as a Microsoft Outlook Add-In, Amazon Web Services API or a direct integration with your CRM or ERP.

Distributed in Pakistan by your Cryptoloc Authorised Partner:

REDtone Digital Services Pvt. Ltd.

Bangalow # D-23, Block 2 Clifton,

Karachi, Karachi City,

Sindh,

Pakistan

Tel: +92 (21) 111-737(RDS)-111

▶ Business Benefits
