

# Secure Your Business Files In The Cloud

**YDF.ai by Cryptoloc is the world's most secure file hosting service. It works by encrypting your files and giving you a key to unlock them.**

**Without that key, no one can access your files.**

**And we mean no one.**

YDF is the world's most secure cloud storage platform. It combines two different types of encryption technologies: RSA 4096 and AES 256. We then apply our patented file splitting technique to ensure that even if your files were compromised, a hacker wouldn't be able to obtain any usable data. When was the last time you logged into your phone using a password and not with your fingerprint or face? Passwords are not secure which is why we don't rely on them, unlike other cloud storage platforms. We use encrypted Private Security Key's ("PSK") to let you access your files. PSK's are required to encrypt and un-encrypt files - without them it is impossible for anyone to remove the encryption. No two businesses are the same which is why we believe businesses should have a choice when it comes to following a privacy law that works for them. We allow you to choose from one of four countries to store your data in, each with different laws surrounding data retention, privacy and records. YDF allows you to work securely in the cloud with all members of your team. Control who sees what, share fully encrypted documents with each other and access files anywhere in the world on any device. Our Workflow Builder allows you to completely automate your document handling processes. Assign retention policies, send email notifications and route files to specific folders.

Join YDF today and get started in minutes.

- ✓ Choose from four different countries to store your data
- ✓ You decide which team members can access certain files and folder and you can see what they do with those files.
- ✓ Send fully encrypted documents straight from Microsoft Outlook and request signatures with the free SecureShare by YDF app.
- ✓ Upload bulk files and synchronise with your PC, Mac or Smartphone
- ✓ Use the Workflow builder to add custom automation and data retention/ processing rules.
